(57) **ABSTRACT**

Methods and apparatus, including computer program products, are provided for device selection. In one aspect there is provided a method. The method may include receiving, at a wireless device through a short-range transceiver, a connection request received from another wireless device; rejecting, by the wireless device, the received connection request, wherein the wireless device obtains, before the rejecting, information from the received connection request to enable, based on at least the obtained information, a subsequent connection to the other wireless device; and initiating the subsequent connection to the other wireless device based on at least the information obtained from the received connection request. Related apparatus, systems, methods, and articles are also described.
